Lake Salvador Shoreline Protection Project Parish Project No. P260502

Project Scope:

The Scope of Work is as follows:

Royal Engineers & Consultants, LLC (**CONSULTANT**) will provide engineering and design services to St. Charles Parish (**OWNER**) for the Lake Salvador Shoreline Protection Project. The project will result in a shovel-ready, 15-mile shoreline protection project along three reaches of Lake Salvador shoreline bordering the Salvador Wildlife Management Area (WMA) and Timken WMA; all reaches were identified as priorities for restoration in the St. Charles Parish SHIELD Plan. The project team will develop a full engineering and design package suitable for the project to proceed to permitting and construction.

The three reaches of the Project include the western shoreline of Lake Salvador south of Bayou Couba, the shoreline of Bayou Couba and the south shore of Couba Island. These reaches have been degraded by daily vessel traffic, strong south winds, and storm events. The following approximate coordinates are the start and end points of the three project reaches. The Lake Salvador Shoreline Protection starts at 29°44'38.22"N, 90°18'36.53"W and ends at 29°44'12.99"N, 90°14'17.34"W; the Bayou Couba Shoreline Protection starts at 29°47'15.35"N, 90°14'18.17"W and ends at 29°48'41.55"N, 90°14'38.25"W, and; the Couba Island Shoreline Protection starts at 29°48'42.94"N, 90°13'40.36"W and ends at 29°48'29.61"N, 90°10'16.54"W (Figure 1).

A. PRELIMINARY DESIGN PHASE

Upon written authorization from OWNER, CONSULTANT shall:

- a. Prepare Preliminary Design Phase documents consisting of final design criteria, preliminary drawings, and outline specifications. Visit the Site, as needed, to prepare the Preliminary Design Phase documents.
- b. Data Gap Analysis: CONSULTANT shall obtain and review all existing data, models, studies, reports, bathymetric data, geotechnical and geophysical data, and other data pertaining to the design of this project, including construction access and pipeline corridors. A data gap analysis shall be performed to evaluate data needs and develop a data acquisition plan to complete the design goals of the project. Said plan shall document how the CONSULTANT intends to obtain missing information and/or services.

- c. Coordinate all surveys and other investigations (see Additional Services) as may be required to prepare construction plans. Investigations and/or surveys shall locate existing utilities (private and public) affected by the project and shall locate and define such utilities sufficiently in the event that utilities have to be relocated.
- d. Prepare a program of borings and other soil investigations that may be required.
- e. Provide written notice to all utility companies (private and public) about the project and request utility “as-built” information from them.
- f. Alternatives Analysis: Through coordination with OWNER, CONSULTANT will develop a suite of alternatives meeting the project objectives and informed by stakeholder input at the Kickoff Meeting, observations obtained through site visits, lessons learned from other projects in the area, and information obtained through review of existing data.
- g. Conceptual Plans: CONSULTANT will develop project vicinity maps and a conceptual site layout depicting proposed construction access and conceptual design drawings with typical cross sections and plan-views; volume, tonnage, and acreage calculations; identification of existing infrastructure, including oil and gas pipelines and wellheads; and equipment access locations and corridors of the proposed shoreline protection feature(s).
- h. Wave Modeling: CONSULTANT will perform numerical wave modeling to determine preliminary hydraulic design criteria in the form of wave height, wave period, wave setup, and wave runup at the proposed shoreline protection features. Wave models, 1D or 2D, will use statistically processed wind magnitudes and directions from local meteorological gages and will use regional topo/bathy from the most recent publicly available elevation datasets. The still-water level in the model will be based on local tidal datums and/or statistically processed data from local water-level gages. Analysis will include calculating wind-generated wave growth and propagation, and will establish incident wave parameters at the shoreline. Should a numerical wave model be required, the analysis will consist, at a minimum, of a regional 2D, phase-averaged wave model. At the conclusion of any potential 2D wave modeling analysis, CONSULTANT will produce a Numerical Wave Modeling Report within the Preliminary Phase Documents submittal, which will document the Regional Wave Field Model (including the setup, boundary conditions, and results of the calibration (to the extent possible), validation (to the extent possible), and design events).
- i. Based on the information contained in the Preliminary Design Phase documents, prepare an opinion of probable Construction Cost for each alternative determined in the Alternatives Analysis
- j. Obtain and review OWNER’s contract documents and OWNER specifications for inclusion within the final contract, plans, and specifications. CONSULTANT shall

also consult with OWNER regarding OWNER policies and practices regarding contract administration and construction management.

- k. Furnish three review copies of the Preliminary Design Phase documents consisting of the Data Gap Analysis, Alternatives Analysis, Wave Modeling, Conceptual Plans, and opinion of probable Construction Cost to OWNER, as well as submitting electronically to the appropriate parties specified by OWNER. CONSULTANT's services under the Preliminary Design Phase will be considered complete on the date when CONSULTANT has delivered to OWNER the final Preliminary Design Phase documents and opinion of probable Construction Cost.

B. FINAL DESIGN PHASE

Upon written acceptance by OWNER of the final Preliminary Design Phase documents and upon written authorization from OWNER, CONSULTANT shall:

- a. Prepare Final Drawings and Specifications indicating the scope, extent, and character of the Work to be performed and furnished by CONTRACTOR.
- b. These Drawings shall include locations of all utilities affected, with ownership and rights-of-way where required. The ownership of any existing utilities shall be determined by contacting each utility provider in writing to obtain any available records and information from the survey. Coordinate with said utility companies on the adjustment, relocation, or removal of existing utility lines and structures within the project that conflict with the proposed improvements.
- c. Visit the Site as needed to assist in preparing the Final Drawings and Specifications.
- d. Prepare necessary applications for permits for submission for approval of local, state, and federal authorities.
- e. Prepare a detailed Final Cost Estimate.
- f. Furnish for review by OWNER three copies of the Final Drawings, Specifications, and Cost Estimate, as well as submit electronically to the appropriate parties specified by OWNER. OWNER shall submit to CONSULTANT any comments regarding the furnished items and any instructions for revisions. CONSULTANT's services under the Final Design Phase will be considered complete on the date when CONSULTANT has delivered to OWNER the Final Drawings, Specifications, and Cost Estimate.
