Controlling Blood Pressure - Results

Home Visit Pilot for AHL Medicare Patients

Testimonial:

- “In the office setting it is difficult to follow all that impacts the patient’s medical condition. Home visits have the unique ability to observe the patient in the comfort of their home and to assess the environment that impacts their health and intervene where necessary. This access to care allows the provider to get a greater picture of what impacts a patient’s health and better direct services to address health needs. Hopefully this helps overcome limitations to care.”
