 - a. The height of the culvert on which the gate closes is 48 inches in height; therefore, the gate was likewise designed to be 48 inches in height. However, due to the possibility of leakage over the top of the gates when the water rises in the Canal, the manufacturer proposed to add 12" in height to the top of the gates (for a 60" gate height) in order to provide an additional safety factor against leakage. The Engineer recommended this option to the Parish for approval as an additional safety factor to the project's benefit.
